PROJECT OVERVIEW

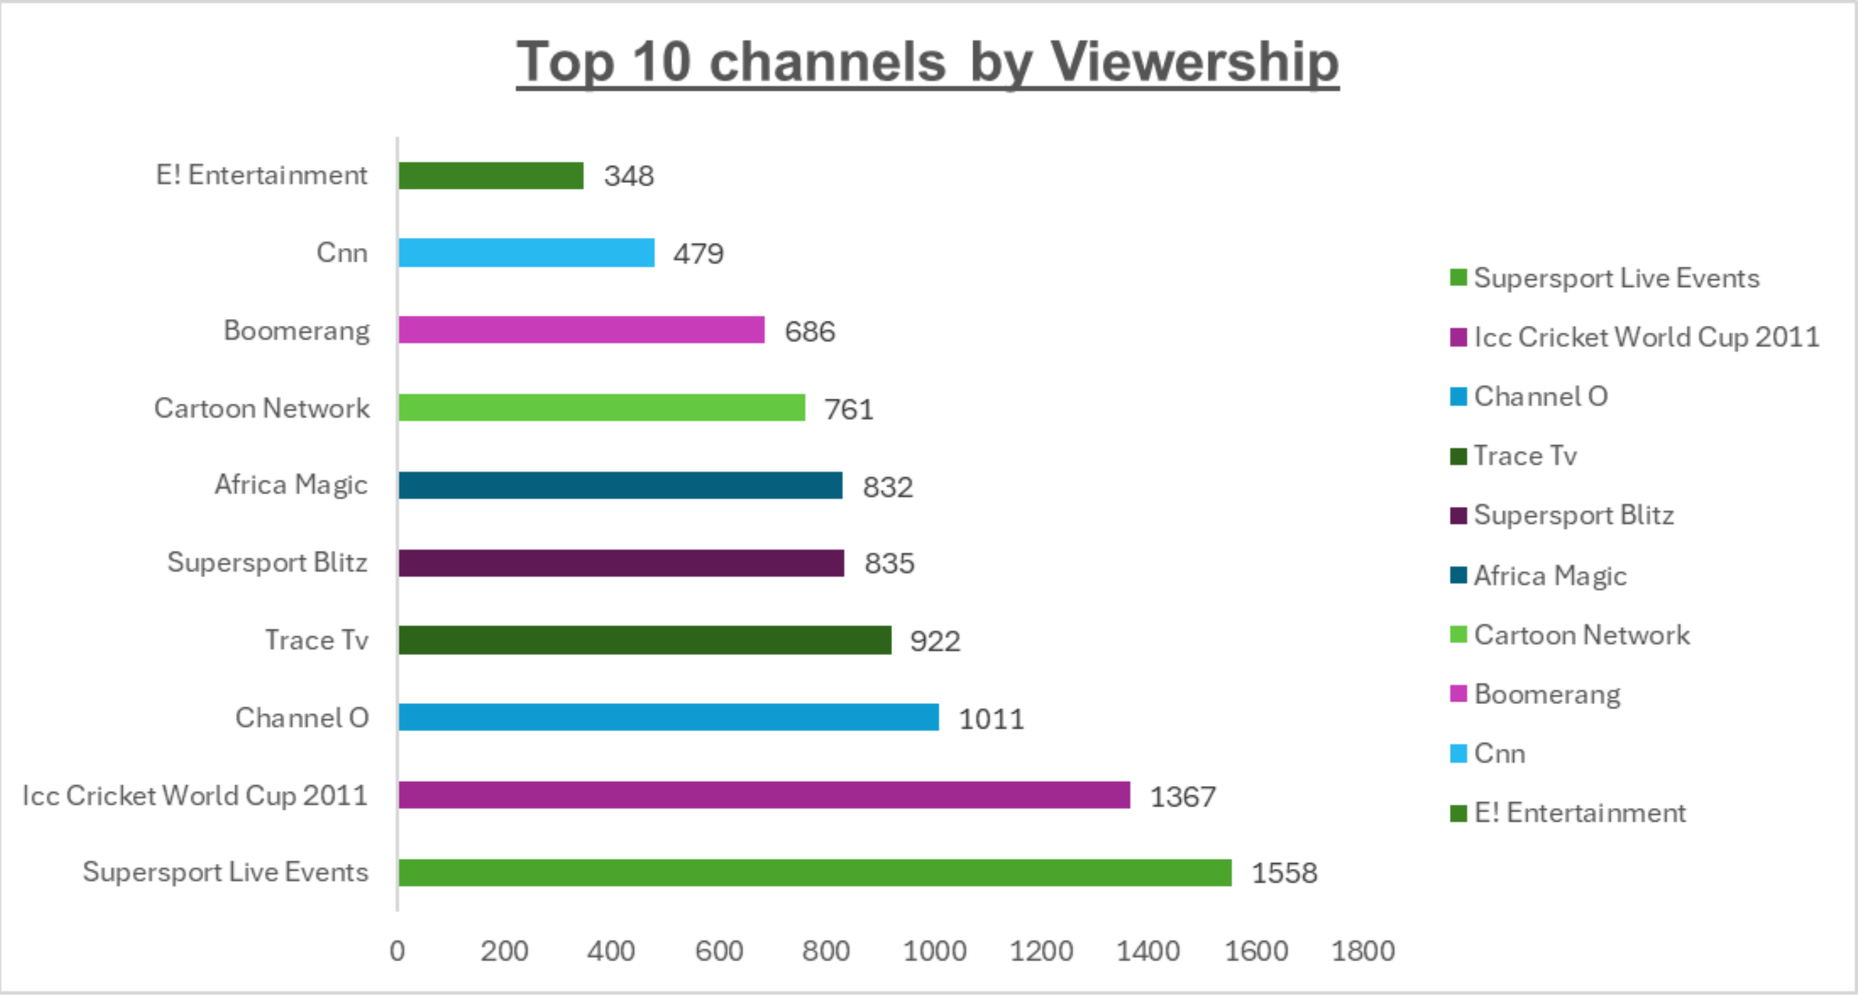
The aim of this project is to analyse the Bright TV viewership data to uncover user behavior, content performance and peak viewing times.

VIEWERSHIP ANALYTICS

2016

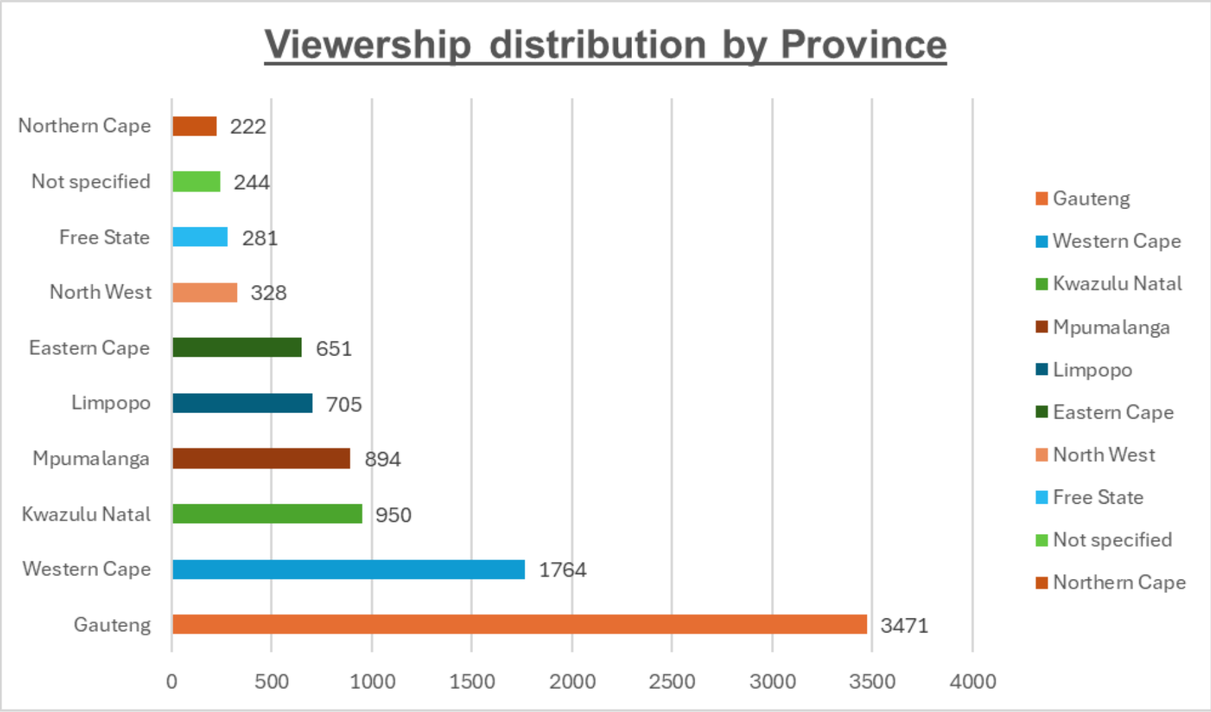
Total Viewers	Channels found	Months analysed	Total Viewing Hours
9 510	21	3 (Jan -Mar)	958

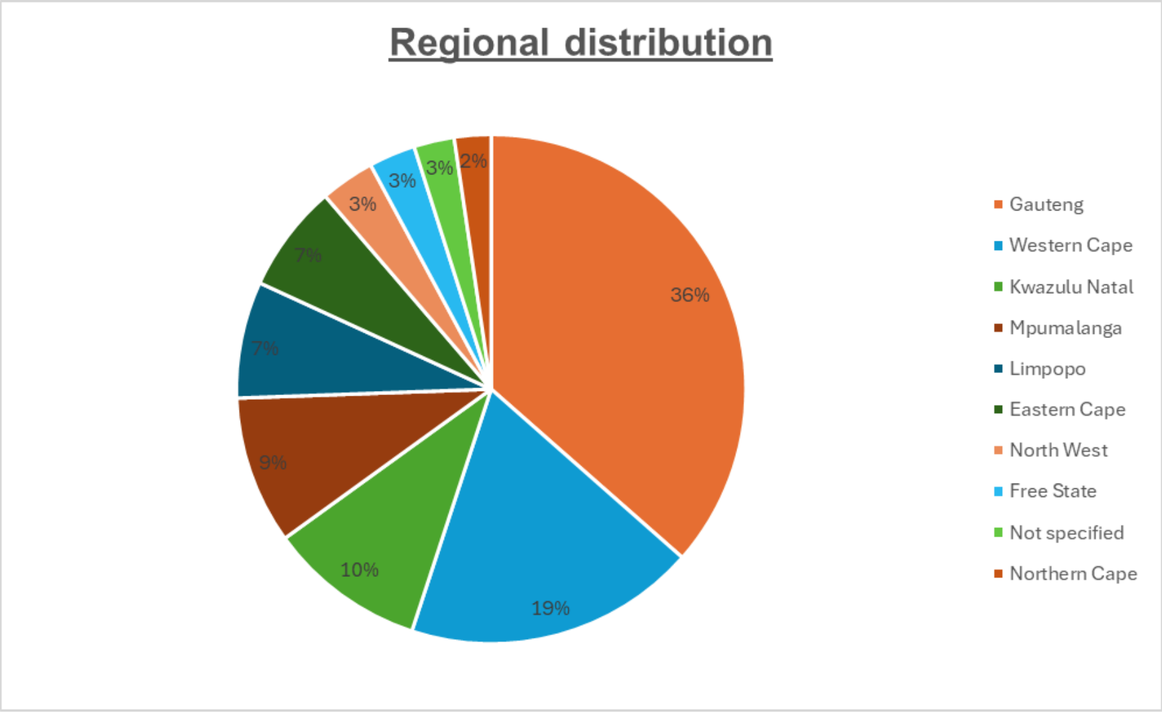
TOP 10 MOST WATCHED SHOWS



Insights: Sports and music channels dominate the viewers attention.

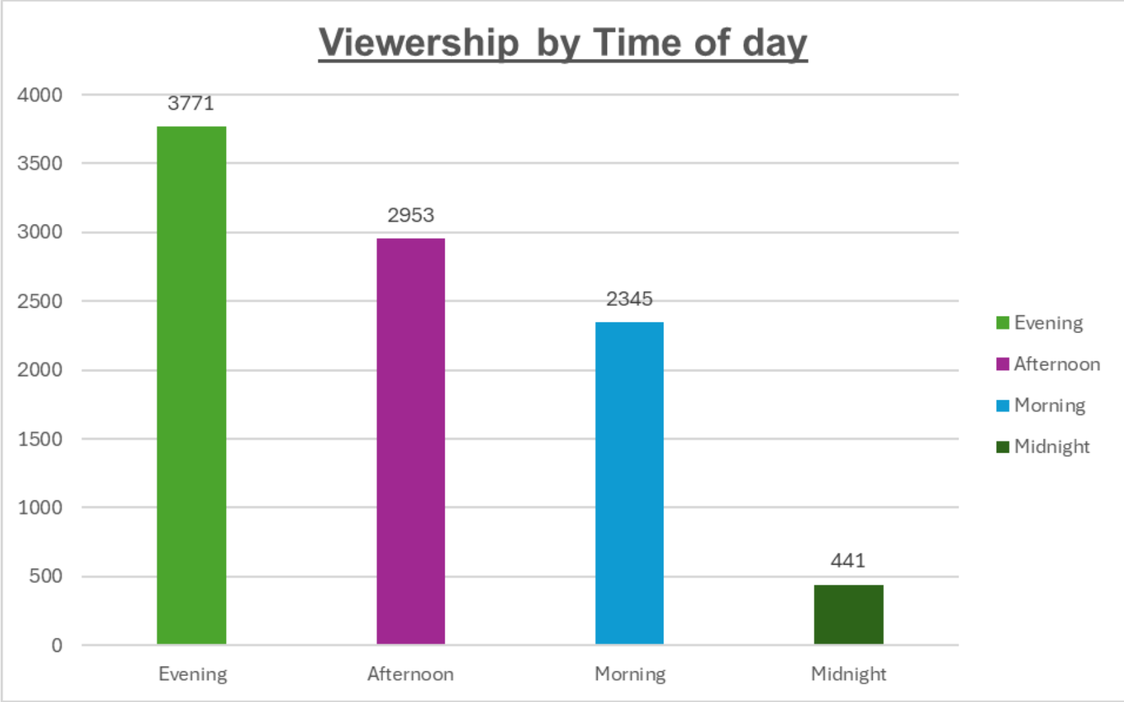
VIEWERSHIP DISTRIBUTION BY PROVINCE

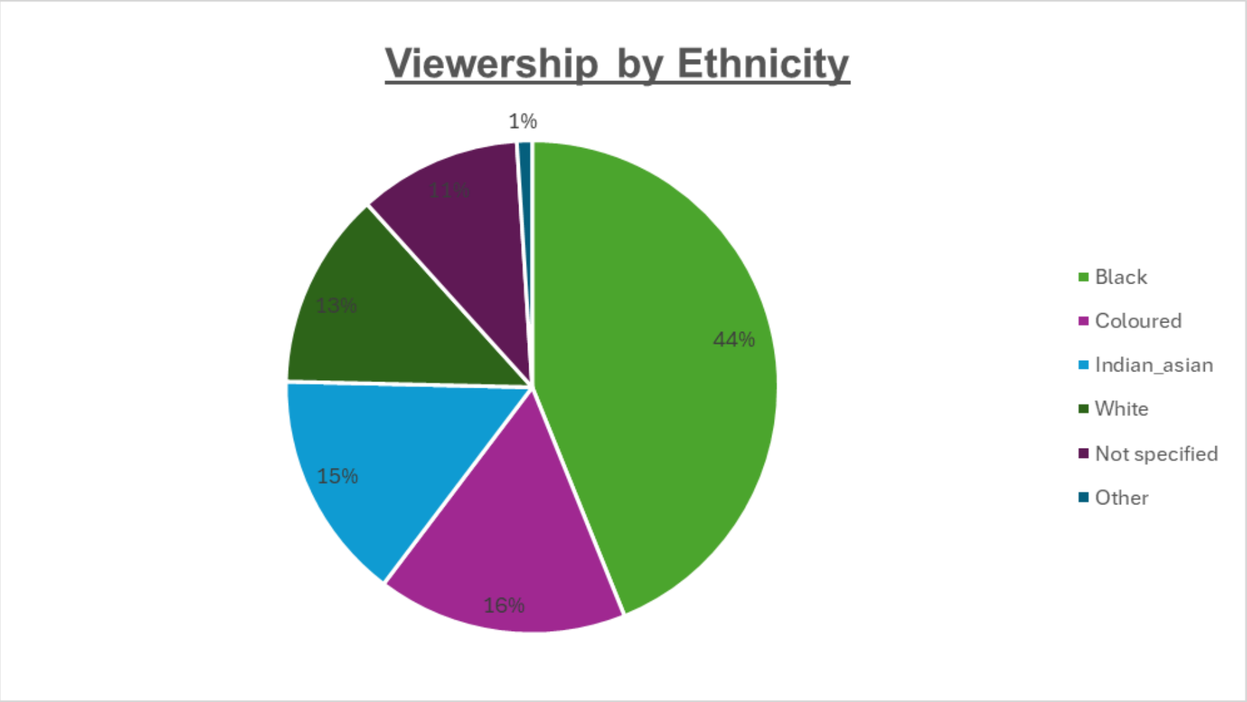




Insights: Gauteng leads all provinces with 36% of total viewers followed by Western Cape with 19%. Notably, a segment of the audience did not provide geographical data and is classified as "not specified."

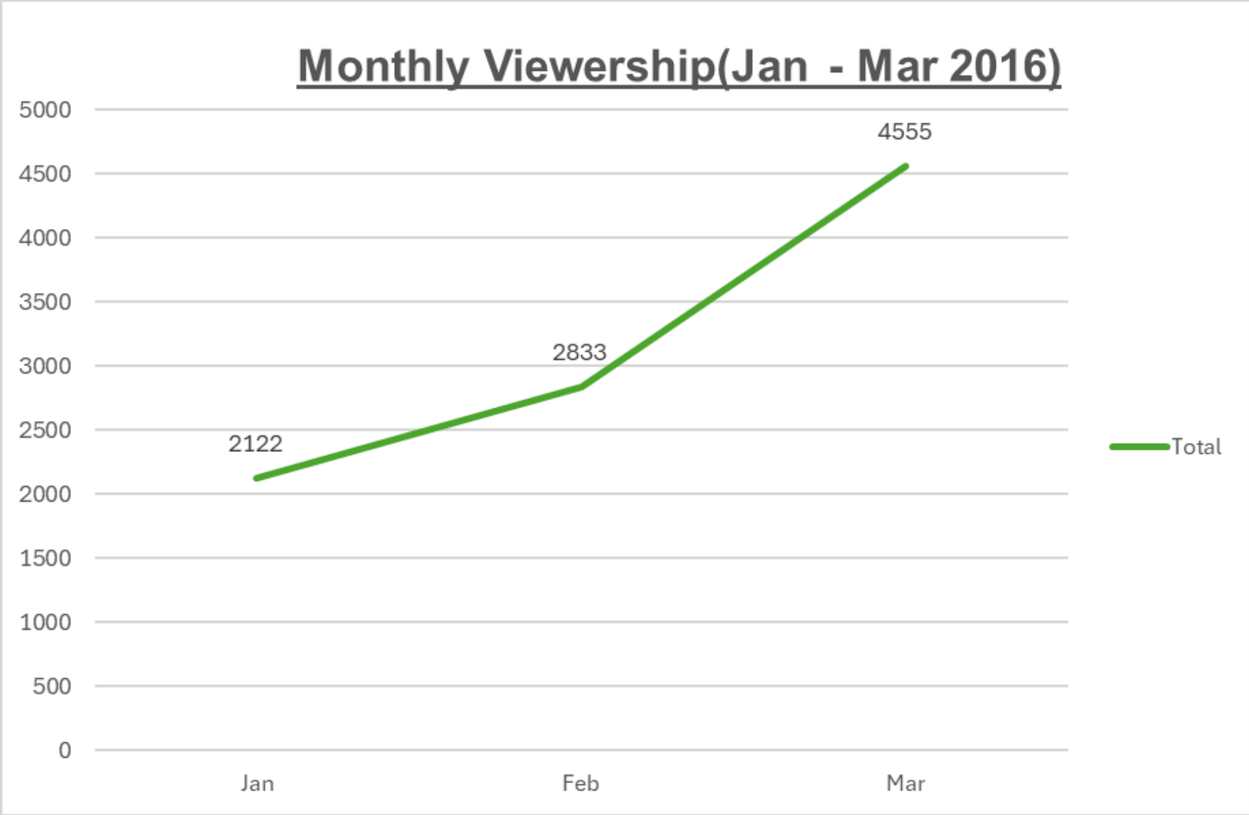
VIEWERS BY TIME OF DAY AND ETHNICITY

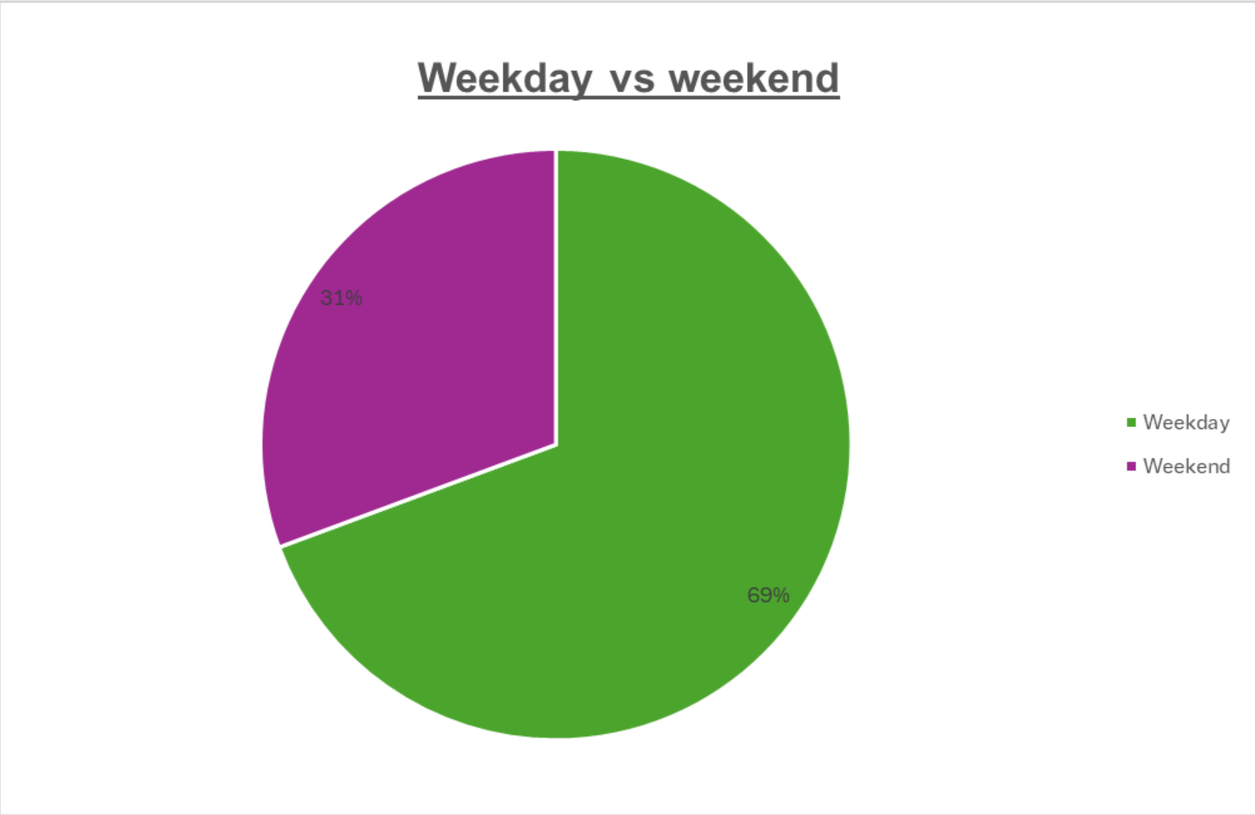




Insights: Evening hours has the highest viewership.
Black people dominate the viewership with 44% followed by colored people with 16%.

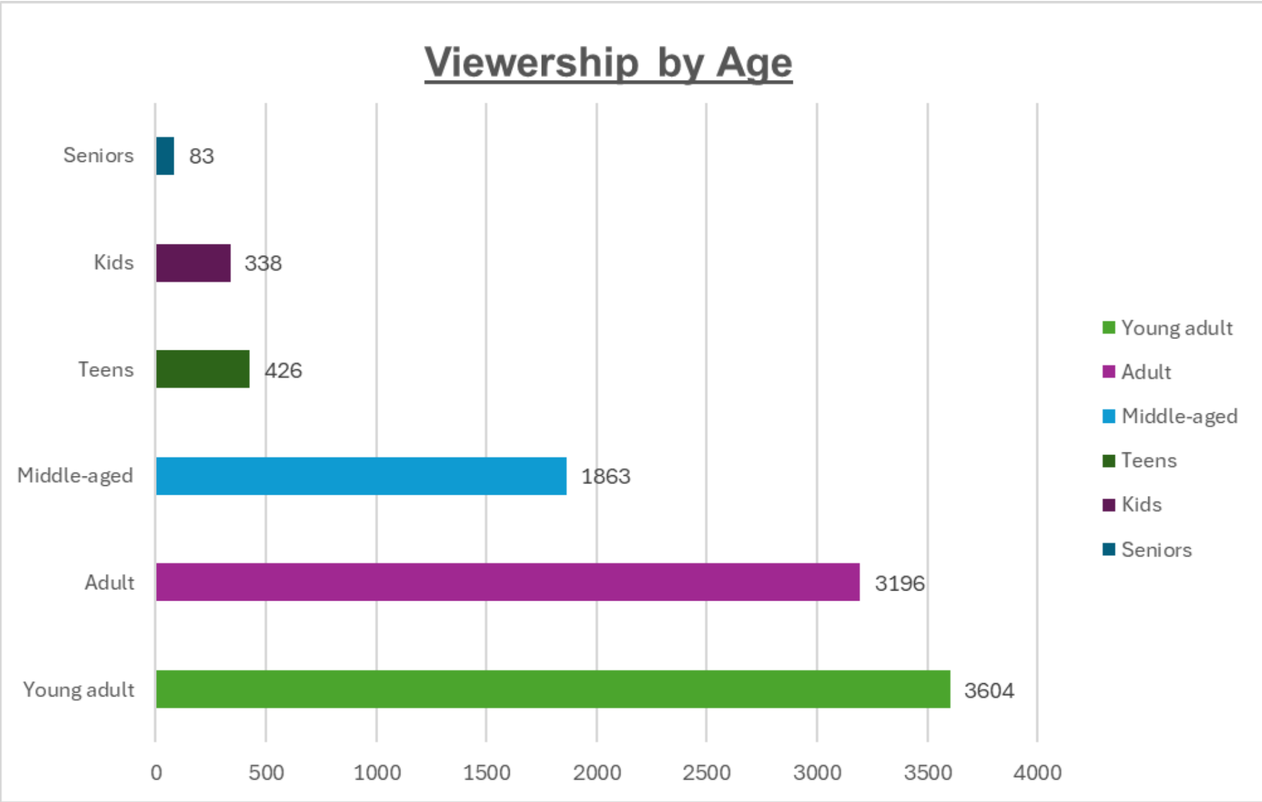
MONTHLY VIEWERSHIP TREND

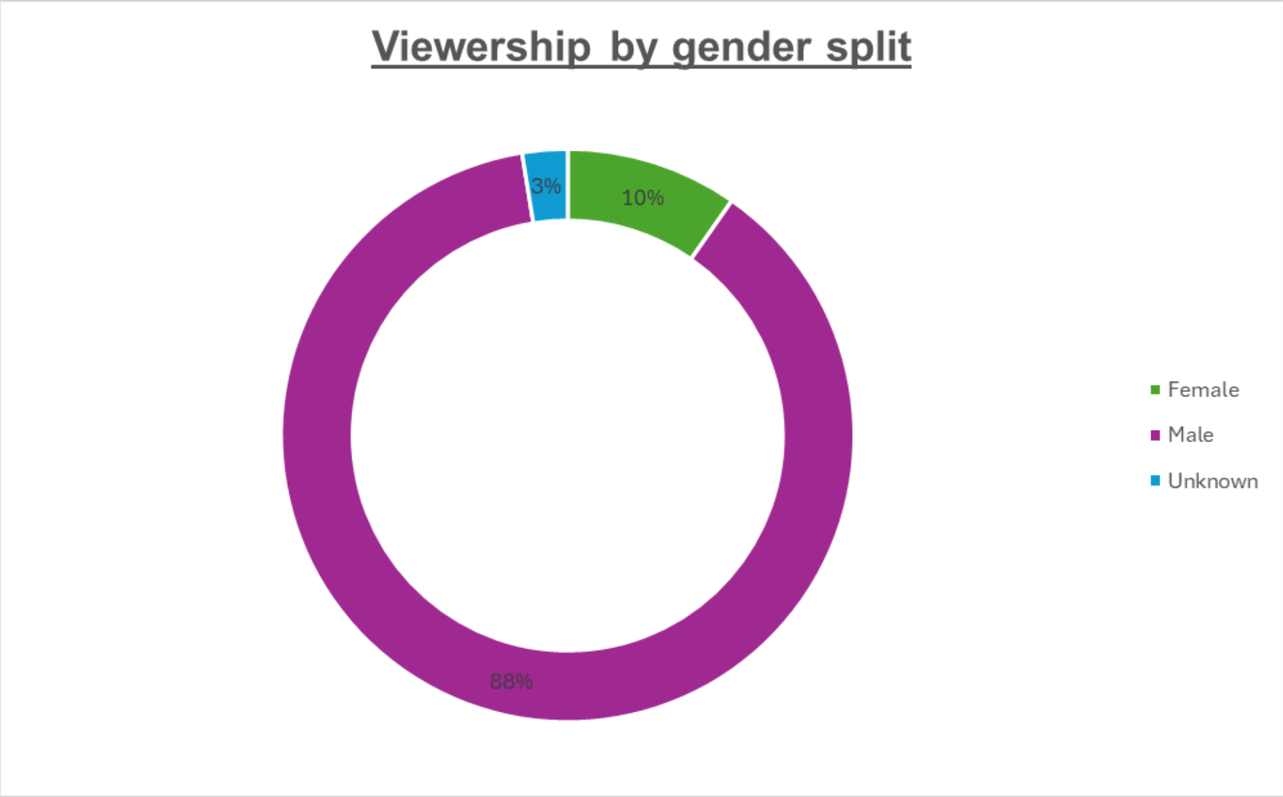




Insights: Viewership is significantly higher on weekdays compared to weekend.
March has the most viewers followed by February, which shows that the viewership has been increasing from month to month.

VIEWERSHIP BY AGE GROUP AND GENDER





Insights: Young adults aged between 20-30 have the highest viewers followed by Adults aged between 31-40 .

Male viewers account for 88% of all viewing sessions with sports being the primary driver.

RECOMMENDATIONS

- Expand sports and live event coverage based on high performance
- Increase engagement strategies for weekends
- Target high traffic evening hours for premium content.
- Tailor marketing campaigns for middle aged male demographic
- Explore digital engagement for the young adult segment which shows moderate engagement
- Simplify the user interface: Ensure more important information i.e. province, gender selection etc. appear early in the sign-up process.

THANK YOU
